**Pointman Oy can design a completely unique spa pool to suit the customer's needs. All you need to do to get the project started is a preliminary sketch. The most common custom pools are therapy pools, multipurpose and specialty pools and cold water pools.**

Customized pools can be fitted with various accessories, such as LED lighting, infrared switches to control the spouts or even speakers. The number of entrances can also be increased.

Therapy pools are designed primarily for therapeutic use in communities and institutions, for example rehabilitation centers.

As with therapy pools, multipurpose pools and specialty pools are custom made and equipped according to customer needs. For example, a cold water pool and heated water pool can be combined as a multiple pool with customized equipment.
