Pointman Oy manufactures glass-fiber reinforced plastic spa pools for both land and ship installation. The surface of the spa pool has a high quality gelcoat surface. If necessary, the outer edge of the pool above water surface can be coated for example with mosaic tiles.

The spa pools are manufactured to meet the requirements of the USPH standard. The pools can be completely customized to the customer's needs.

The following aspects have been considered in the design of the pools:

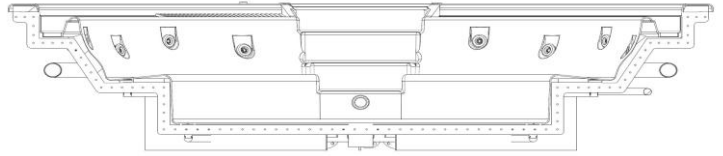

- The eco-design of the water treatment system ensures that water is not wasted
- Reduced water loss due to raised side profile
- Ergonomically designed seat unit
- Providing clients with luxurious spa experience
- Simple maintenance instructions

Picture: Porvoo indoor swimming hall

Pointman's delivery includes:

- Manufacturing the spa pool and support elements for the profile
- Manufacture of outriggers
- Pool's inside components (for example lights, drain covers and PVC-U piping inside the pool)
- Desired interfaces below the pool (specified by the customer)
- Delivery to destination specified by the customer
